

Java

```
class Solution {  
    public int leastInterval(char[] tasks, int n) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {character[]} tasks  
 * @param {number} n  
 * @return {number}  
 */  
var leastInterval = function(tasks, n) {  
  
};
```

TypeScript

```
function leastInterval(tasks: string[], n: number): number {  
  
};
```

C++

```
class Solution {
```

```
public:
    int leastInterval(vector<char>& tasks, int n) {

    }
};
```

C#

```
public class Solution {
    public int LeastInterval(char[] tasks, int n) {

    }
}
```

Kotlin

```
class Solution {
    fun leastInterval(tasks: CharArray, n: Int): Int {

    }
}
```
